

The purpose of this document is to provide a cheat sheet on how to install & configure Anti-Virus protection on MAC OS X with McAfee Security's VIREX 7.21. It's not my intension to replace any official documentation or release notes.

System Requirements

- Apple MacIntosh OS X 10.0.3 or newer operating system
- Power PC G3 or above
- At least 12 Megabytes of free disk space

Used Equipment

- Apple Macinstosh OS X 10.2.7
- Powerbook G4 1,25 Ghz , 1GB Memory

Installation

Locate the File Virex72.gz and copy it to your Harddisk. Installing from CD ROM will result to crash StuffIt Expander. Locate the copied file on your harddisk

Of course, an automatic DAT update process is set by use of PREFERENCES.

You also can run Virex on the command line prompt and of course to add a couple of scripts with predefined parameters, found on the user's guide, which will be installed with the product.
